

**EMWIJET**  
Spres from  
cardboard to food  
always single pass

## A different way to print in single pass.

**Emwijet Spress** is an innovative single pass printer based on the piezo inkjet technology, this means no contact between the printer and the surface to be printed.

Thanks to its own hardware and software development Spress is available in various printers models, wide format or multilines, single or multicolors

The possible printer's solutions are based on the combination of more inkjet printheads, these can be dedicated to one or more colors. Together with the

advantage of the speed, given by the single pass, it is possible to use these printers in a wide range of industrial application where flexo printing technology is commonly used; this having all the advantages of the digital printing.

With this product line it is possible to get many advantages as:

- ★ very low print cost.
- ★ Low maintenance.
- ★ Single pass print - high productivity.

★ maximum flexibility and tailor made print, thanks to the digital printing technology

★ Multilines or wide format always in single pass, printing width from 70 mm up to 560 mm single and multicolor.

★ Various possible configurations and ink types for fitting many industrial requests.

★ Food Grade Approved.
